Drawing on personal experiences of Hinduism on the ground, this book provides a reflective context within which religious practices can be understood and appreciated. It conveys the rich realities of the Hindu tradition and the academic approaches through which they are studied. The chapters cover a wide range of topics, including dance, music, performance, festival traditions, temples, myth, philosophy, women's practices, and divine possession. The engaging narratives are accompanied by contextual discussions and advice on such topics as conducting fieldwork, colonialism, Hindu seasonal celebrations, understanding deities, and aesthetics in Hinduism. All the entries are accompanied by photographs and suggestions for further reading. It has been the authors' experience that the overwhelming majority of students in MBA derivatives courses go on to careers where a deep conceptual, rather than solely mathematical, understanding of products and models is required. The first edition of Derivatives looks to create precisely such a blended approach, one that is formal and rigorous, yet intuitive and accessible. The main body of this book is divided into six parts. Parts 1-3 cover, respectively, futures and forwards; options; and swaps. Part 4 examines term-structure modeling and the pricing of interest-rate derivatives, while Part 5 is concerned with credit derivatives and the modeling of credit risk. Part 6 discusses computational issues. Art Practice as Research: Inquiry in the Visual Arts presents a compelling argument that the creative and cultural inquiry undertaken by artists is a form of research. The text explores themes, practices, and contexts of artistic inquiry and positions them within the discourse of research. Author Graeme Sullivan argues that legitimate research goals can be achieved by choosing different methods than those offered by the social sciences. The common denominator in both approaches is the attention given to rigor and systematic inquiry. Artists emphasize the role of the imaginative intellect in creating, criticizing, and constructing knowledge that is not only new

but also has the capacity to transform human understanding. 1. Income Tax : An Introduction, 2. Important Definitions, 3. Assessment on Agricultural Income, 4. Exempted Incomes, 5. Harish Salve failed his CA exam twice. Mukul Rohatgi was unable to secure a place at the Law Faculty, Delhi University. Rohinton Nariman was trained to become a Parsi priest. Legal Eagles examines the lives and times of India's top seven lawyers, who fought some of the country's landmark courtroom battles. Tracing their journey from their childhood days to the present, the book highlights the important milestones of their careers, their victories and failures, their influences, and their work ethic and role models, demonstrating that the path to success is paved with determination, grit and challenges. Journalist Indu Bhan gives a ringside view of the most significant case handled by each of these lawyers, including the Vodafone tax case, Coalgate and the 2G spectrum controversy, among others. Derivatives makes a special effort throughout the text to explain what lies behind the formal mathematics of pricing and hedging. Questions ranging from 'how are forward prices determined?' to 'why does the Black-Scholes formula have the form it does?' are answered throughout the text. The authors use verbal and pictorial expositions, and sometimes simple mathematical models, to explain underlying principles before proceeding to formal analysis. Extensive uses of numerical examples for illustrative purposes are used throughout to supplement the intuitive and formal presentations. Comprehensive coverage of all types of innovative insurance products such as long-term care insurance, commercial insurance, catastrophe insurance, liability insurance to name a few • Details on developments in international insurance with latest data • Appendices to support the information provided in chapters - All clauses and words of marine insurance are given in appendix The 2nd edition of this successful book has several new features. The calibration discussion of the basic LIBOR market model has been enriched considerably, with an analysis of the impact of the swaptions interpolation technique and of the exogenous instantaneous correlation on the calibration outputs. A discussion of historical estimation of the instantaneous correlation matrix and of rank reduction has been added, and a LIBOR-model consistent swaption-volatility interpolation technique has been introduced. The old sections devoted to the smile issue in

the LIBOR market model have been enlarged into a new chapter. New sections on local-volatility dynamics, and on stochastic volatility models have been added, with a thorough treatment of the recently developed uncertain-volatility approach. Examples of calibrations to real market data are now considered. The fast-growing interest for hybrid products has led to a new chapter. A special focus here is devoted to the pricing of inflation-linked derivatives. The three final new chapters of this second edition are devoted to credit. Since Credit Derivatives are increasingly fundamental, and since in the reduced-form modeling framework much of the technique involved is analogous to interest-rate modeling, Credit Derivatives -- mostly Credit Default Swaps (CDS), CDS Options and Constant Maturity CDS - are discussed, building on the basic short rate-models and market models introduced earlier for the default-free market. Counterparty risk in interest rate payoff valuation is also considered, motivated by the recent Basel II framework developments. Municipal Liability: Law and Practice, Fourth Edition This book discusses the unique epidemiology of fungal infections in Asia, illustrating that the situation in these countries is different from that in Western countries in terms of the causative species, natural history and management strategies. Asia, the world's largest continent and home to more than half the global population, has conditions that favor the growth of many fungi, including a number of unique species. Further, socio-economic conditions such as overcrowding, compromised health care facilities and lack of awareness add to the morbidity and mortality due to fungal diseases in this part of the world. Since the majority of Asian countries do not have good diagnostic mycology laboratories, antifungal management is often based on experience. The limited data from Asian countries suggest a very high incidence of fungal infections. This book addresses epidemiology of fungal infections in general and specific populations of Asia, fungal allergy, and diagnosis and management in resource-limited environments. The book is must read for busy clinicians, microbiologists and critical care providers. Derivatives makes a special effort throughout the text to explain what lies behind the formal mathematics of pricing and hedging. Questions ranging from 'how are forward prices determined?' to 'why does the Black-Scholes formula have the form it does?' are answered throughout the text. The authors use verbal and pictorial expositions, and sometimes simple mathematical models, to explain underlying principles before proceeding to formal analysis. Extensive uses of numerical examples for illustrative purposes are used throughout to supplement the intuitive and formal presentations. The society of traditional India is frequently characterized as static and dominated by caste. This study challenges older interpretations, arguing that medieval India was actually a time of dynamic change and fluid social identities. Using records of religious endowments from Andhra Pradesh, author Cynthia Talbot reconstructs a regional society of the precolonial past as it existed in practice. This book constitutes the thoroughly refereed proceedings of the 9th International Conference on Design Science Research in

Information Systems and Technology, DESRIST 2014, held in Miami, FL, USA in May 2014. The 19 full papers, 7 research-in-progress papers and 18 short papers describing prototype demonstrations were carefully reviewed and selected from 71 submissions. The papers are organized in topical sections on design science; emerging themes; meta issues; methods; supporting business processes; team support; work-in-progress papers and prototypes. Useful for Graduate and P.G. Students of Economics and Candidates Appearing for Competitive Examinations. It examines every major problem of the economy of public sector first in the context of the developed countries of the western world and then their relevance is looked into from the angle of the developing countries. Encyclopedia of Pharmacy Practice and Clinical Pharmacy covers definitions, concepts, methods, theories and applications of clinical pharmacy and pharmacy practice. It highlights why and how this field has a significant impact on healthcare. The work brings baseline knowledge, along with the latest, most cutting-edge research. Dermal fillers are substances injected into the face to fill lines and add volume to areas such as the lips and cheeks. They are not permanent and usually last between six and eighteen months. Similarly, Botulinum toxin (Botox) injections relax the facial muscles to smooth out line and wrinkles, such as frown lines and crow's feet. Botox is not permanent and usually lasts for three to four months. This book is a comprehensive guide to the clinical use of fillers and Botox. Beginning with an overview of the history and basic science of cosmetic injectables, the book is then divided into two key sections. Section one examines fillers, discussing facial anatomy, patient selection, anaesthesia, and injection techniques for different areas of the face. Treatment plans, patient consent, and before and after instructions, are also discussed. The second section covers Botox and its use for treating different types of facial lines, and includes chapters on complications and their management, and Botox in men. The extensive text is enhanced by nearly 300 clinical photographs, illustrations and tables. Using Delhi's contemporary history as a site for reflection, Pirate Modernity moves from a detailed discussion of the technocratic design of the city by US planners in the 1950s, to the massive expansions after 1977, culminating in the urban crisis of the 1990s. As a practice, pirate modernity is an illicit form of urban globalization. Poorer urban populations increasingly inhabit non-legal spheres: unauthorized neighborhoods, squatter camps and bypass legal technological infrastructures (media, electricity). This pirate culture produces a significant enabling resource for subaltern populations unable to enter the legal city. Equally, this is an unstable world, bringing subaltern populations into the harsh glare of permanent technological visibility, and attacks by urban elites, courts and visceral media industries. The book examines contemporary Delhi from some of these sites: the unmaking of the city's modernist planning design, new technological urban networks that bypass states and corporations, and the tragic experience of the road accident terrifyingly enhanced by technological culture. Pirate Modernity moves between past and present, along with debates in Asia, Africa and Latin America on urbanism, media culture, and everyday life. This pioneering book suggests cities have to be revisited afresh after proliferating media culture. Pirate Modernity boldly draws from urban and cultural theory to open a new agenda for a world after media urbanism. Amid the ongoing changes in how health care is administered and financed, prevention-oriented care is a critical and cost-effective method for improving population health through primary care. As the key figure in promoting patients' health and prevention of disease, the primary care provider can play a major role in patient engagement, self-management, and behavior change. Prevention Practice in Primary Care systematically explores state-of-the-art practical approaches to effective prevention in primary care. Guided by theory and evidence, the book reviews approaches to risk factor identification and modification for the major causes of mortality in adulthood, including cancer, stroke, and cardiovascular disease. Topical coverage in this book includes: • the practical applications of

genomics and proteomics to personalizing prevention · transformative approaches to practice change, including the patient-centered medical home, academic detailing, and practice facilitation · Engaging self-management and behavior change using counseling tools (goal setting, assessing the stage of change, motivational interviewing, and the five A's) Prevention Practice in Primary Care is a vital, practical guidebook for the implementation of evidence-based prevention to improve patient health. Brief, simple summaries and innovative content make it book a valuable reference for busy practitioners and students alike. Income Tax and Central Sales Tax presents an updated and comprehensive study of income tax laws. The concept of graded and comprehensive problems will bridge the gap between theory and practice and will lay a firm foundation to develop and sharpen the understanding of law. A chapter on 'Value Added Tax', popularly known as "VAT" is also included. "In this book, Ruth Rosengarten considers the expanded field of the 'photographic' in the work of Indian artist Vivan Sundaram, beginning with the notion that Sundaram is not a photographer in any traditional sense of the term. Discussing the ontological shift that photography has undergone in the age of digital production, Rosengarten considers 'photography' as more a practice than a medium. Exploring the uses of the historical artistic methods of assemblage, bricolage and the assisted readymade, she throws light on Sundaram's individual uses, and subversions, of documentary photography. In each chapter, a single or two bodies of work are analysed, positioning Sundaram in relation to various propositions in which the relationship between photography and politics is probed. Often site-specific and always entailing the collaboration of numerous other practitioners, Sundaram's work lays bare the limitations of individual studio practice and single authorship. The works, Rosengarten argues, invite us to consider and immerse ourselves materially in the ethical claims of photography, raising question about archivalism in art practice, and throwing light on Sundaram's locational commitment as a citizen artist."-- Cover flap. The four-volume set LNCS 11244, 11245, 11246, and 11247 constitutes the refereed proceedings of the 8th International Symposium on Leveraging Applications of Formal Methods, Verification and Validation, ISoLA 2018, held in Limassol, Cyprus, in October/November 2018. The papers presented were carefully reviewed and selected for inclusion in the proceedings. Each volume focusses on an individual topic with topical section headings within the volume: Part I, Modeling: Towards a unified view of modeling and programming; X-by-construction, STRESS 2018. Part II, Verification: A broader view on verification: from static to runtime and back; evaluating tools for software verification; statistical model checking; RERS 2018; doctoral symposium. Part III, Distributed Systems: rigorous engineering of collective adaptive

systems; verification and validation of distributed systems; and cyber-physical systems engineering. Part IV, Industrial Practice: runtime verification from the theory to the industry practice; formal methods in industrial practice - bridging the gap; reliable smart contracts: state-of-the-art, applications, challenges and future directions; and industrial day. Fluid management is the basis of all clinical management in neurosurgical patients. This is a complete book on transfusion practice in clinical neurosciences. It covers in detail the fluids and blood transfusion practice, also discussing the role of total parenteral nutrition in relation to neurologic patients. The importance of fluid management clinically can be seen as on one hand it plays a significant role in maintaining the hydration of the patient and on the other provides sufficient relaxation to the brain to facilitate surgery. The use of hyperosmolar therapy is unique to the practice of clinical neurosciences. Certain fluid types such as those containing glucose are detrimental to the brain. Likewise, large fluid shifts and blood loss are often observed during neurosurgical procedures. It is relevant to understand the physiology of blood and blood transfusion. This book covers all of these topics in their true relevance. It also provides an evidence-based practice of fluid administration for all neurologic patients including, pediatric and geriatric. The proposed book will be useful for trainees and clinicians in any field of clinical neurosciences. It would be very useful for residents and fellows pursuing their courses in neuroanesthesia, neurocritical care, neurosurgery, emergency medicine, anesthesia, and critical care. Fellows, Resident doctors, postgraduates, and even undergraduates would be benefited from this book. The book would be a ready-reckoner and useful during the clinical practice of physicians from varied specialties. The author of the acclaimed Stringer: A Reporter's Journey in the Congo now moves on to Rwanda for a gripping look at a country caught still in political and social unrest, years after the genocide that shocked the world. Bad News is the story of Anjan Sundaram's time running a journalist's training program out of Kigali, the capital city of one of Africa's most densely populated countries, Rwanda. President Kagame's regime, which seized power after the genocide that ravaged its population in 1994, is often held up as a beacon for progress and modernity in Central Africa and is the recipient of billions of dollars each year in aid from Western governments and international organizations. Lurking underneath this shining vision of a modern, orderly state, however, is the powerful climate of fear springing from the government's brutal treatment of any voice of dissent. "You can't look and write," a policeman ominously tells Sundaram, as he takes notes at a political rally. In Rwanda, the testimony of the individual—the evidence of one's own experience—is crushed by the pensée unique: the single way of thinking and speaking, proscribed by those in power. A vivid portrait of a country at an

extraordinary and dangerous place in its history, Bad News is a brilliant and urgent parable on freedom of expression, and what happens when that power is seized.
