Revel for Exploring Biological Anthropology: The Essentials -- Access Card Nov 13 2019 Present a concise overview of biological anthropology, from early foundations to recent innovations REVEL(TM) for Exploring Biological Anthropology: The Essentials combines concise coverage of the foundations of the field with modern innovations and discoveries, helping students understand, and get excited about, the discipline. Because the authors conduct research in three of the main areas of biological anthropology -- the human fossil record (Susan Antón), primate behavior and ecology

(Craig Stanford), and human biology and the brain (John Allen) -- they offer a specialist approach that engages students and gives them everything they need to master the subject. REVEL for the Fourth Edition continues to present traditional physical anthropology within a modern Darwinian framework, and includes coverage of contemporary discoveries to highlight the ever-increasing body of knowledge in biological anthropology. REVEL is Pearson's newest way of delivering our respected content. Fully digital and highly engaging, REVEL replaces the textbook and gives students everything they need for the course. Informed by extensive research on how people read, think, and learn, REVEL is an interactive learning environment that enables students to read, practice, and study in one continuous experience -- for less than the cost of a traditional textbook. NOTE: REVEL is a fully digital delivery of Pearson content. This ISBN is for the standalone REVEL access card. In addition to this access card, you will need a course invite link, provided by your instructor, to register for and use REVEL.

The Enculturated Gene Jul 02 2021 In the 1980s, a research team led by Parisian scientists identified several unique DNA sequences, or haplotypes, linked to sickle cell anemia in African populations. After casual observations of how patients managed this painful blood disorder, the researchers in question postulated that the Senegalese type was less severe. The Enculturated Gene

sigonyth.com

traces how this genetic discourse has blotted from view the roles that Senegalese patients and doctors have played in making sickle cell "mild" in a social setting where public health priorities and economic austerity programs have forced people to improvise informal strategies of care. Duana Fullwiley shows how geneticists, who were fixated on population differences, never investigated the various modalities of self-care that people developed in this context of biomedical scarcity, and how local doctors, confronted with dire cuts in Senegal's health sector, wittingly accepted the genetic prognosis of better-than-expected health outcomes. Unlike most genetic determinisms that highlight the absoluteness of disease, DNA haplotypes for sickle cell in Senegal did the opposite. As Fullwiley demonstrates, they allowed the condition to remain officially invisible, never to materialize as a health priority. At the same time, scientists' attribution of a less severe form of Senegalese sickle cell to isolated DNA sequences closed off other explanations of this population's measured biological success. The Enculturated Gene reveals how the notion of an advantageous form of sickle cell in this part of West Africa has defined--and obscured--the nature of this illness in Senegal today. Introducing Medical Anthropology Mar 30 2021 This revised textbook provides students with a first exposure to the growing field of medical anthropology. The narrative is guided by unifying themes. First, medical anthropology is actively engaged in helping to address pressing health problems around the globe through research, intervention, and policy-related initiatives. Second, illness and disease cannot be fully understood or effectively addressed by treating them solely as

sigonyth.com

biological in nature; rather, health problems involve complex biosocial processes and resolving them requires attention to range of factors including systems of belief, structures of social relationship, and environmental conditions. Third, through an examination of health inequalities on the one hand and environmental degradation and environment-related illness on the other, the book underlines the need for going beyond cultural or even ecological models of health toward a comprehensive medical anthropology. The authors show that a medical anthropology that integrates biological, cultural, and social factors to truly understand the origin of ill health will contribute to more effective and equitable health care systems.

Seasonality in Primates Nov 25 2020 This book explores how seasonal variation in resource abundance might have driven primate and human evolution.

Jaws Feb 26 2021 There's a silent epidemic in western civilization, and it is right under our noses. Our jaws are getting smaller and our teeth crooked and crowded, creating not only aesthetic challenges but also difficulties with breathing. Modern orthodontics has persuaded us that braces and oral devices can correct these problems. While teeth can certainly be straightened, what about

the underlying causes of this rapid shift in oral evolution and the health risks posed by obstructed airways? Sandra Kahn and Paul R. Ehrlich, a pioneering orthodontist and a world-renowned evolutionist, respectively, present the biological, dietary, and cultural changes that have driven us toward this major health challenge. They propose simple adjustments that can alleviate this developing crisis, as well as a major alternative to orthodontics that promises more significant long-term relief. Jaws will change your life. Every parent should read this book.

Planet Without Apes Sep 16 2022 Can we live with the consequences of wiping our closest relatives off the face of the Earth, and all the biological knowledge about ourselves that would die along with them? Extinction of the great apes threatens to become a reality within a few human generations. Stanford tells us how we can redirect the course of an otherwise bleak future.

[Exploring Biological Anthropology: The Essentials](#) Aug 03 2021

Behave Jun 20 2020 Why do we do the things we do? Over a decade in the making, this game-changing book is Robert Sapolsky's genre-shattering attempt to answer that question as fully as perhaps only he could, looking at it from every angle. Sapolsky's storytelling concept is delightful but it also has a powerful intrinsic logic: he starts by looking at the factors that bear on a person's reaction in the precise moment a behavior occurs, and then hops back in time from there, in stages,

sigonyth.com

ultimately ending up at the deep history of our species and its genetic inheritance. And so the first category of explanation is the neurobiological one. What goes on in a person's brain a second before the behavior happens? Then he pulls out to a slightly larger field of vision, a little earlier in time: What sight, sound, or smell triggers the nervous system to produce that behavior? And then, what hormones act hours to days earlier to change how responsive that individual is to the stimuli which trigger the nervous system? By now, he has increased our field of vision so that we are thinking about neurobiology and the sensory world of our environment and endocrinology in trying to explain what happened. Sapolsky keeps going--next to what features of the environment affected that person's brain, and then back to the childhood of the individual, and then to their genetic makeup. Finally, he expands the view to encompass factors larger than that one individual. How culture has shaped that individual's group, what ecological factors helped shape that culture, and on and on, back to evolutionary factors thousands and even millions of years old. The result is one of the most dazzling tours de horizon of the science of human behavior ever attempted, a majestic synthesis that harvests cutting-edge research across a range of disciplines to provide a subtle and nuanced perspective on why we ultimately do the things we do...for good and for ill. Sapolsky builds on this understanding to wrestle with some of our deepest and thorniest questions relating to tribalism and xenophobia, hierarchy and competition, morality and free will, and war and peace. Wise, humane, often very funny, *Behave* is a towering achievement, powerfully humanizing, and downright heroic in its own right.

The Hunting Apes Jun 01 2021 What makes humans unique? What makes us the most successful animal species inhabiting the Earth today? Most scientists agree that the key to our success is the unusually large size of our brains. Our large brains gave us our exceptional thinking capacity and led to humans' other distinctive characteristics, including advanced communication, tool use, and walking on two legs. Or was it the other way around? Did the challenges faced by early humans push the species toward communication, tool use, and walking and, in doing so, drive the evolutionary engine toward a large brain? In this provocative new book, Craig Stanford presents an intriguing alternative to this puzzling question--an alternative grounded in recent, groundbreaking scientific observation. According to Stanford, what made humans unique was meat. Or, rather, the desire for meat, the eating of meat, the hunting of meat, and the sharing of meat. Based on new insights into the behavior of chimps and other great apes, our now extinct human ancestors, and existing hunting and gathering societies, Stanford shows the remarkable role that meat has played in these societies.

Perhaps because it provides a highly concentrated source of protein--essential for the development and health of the brain--meat is craved by many primates, including humans. This craving has given meat genuine power--the power to cause males to form hunting parties and organize entire cultures around hunting. And it has given men the power to manipulate and control women in these cultures. Stanford argues that the skills developed and required for successful hunting and especially the sharing of meat spurred the explosion of human brain size over the past 200,000 years. He then turns his attention to the ways meat is shared within primate and human societies to argue that this all-important activity has had profound effects on basic social structures that are still felt today. Sure to spark a lively debate, Stanford's argument takes the form of an extended essay on human origins. The book's small format, helpful illustrations, and moderate tone will appeal to all readers interested in those fundamental questions about what makes us human.

The New Chimpanzee Apr 30 2021 Recent discoveries about wild chimpanzees have dramatically reshaped our understanding of these great apes and their kinship with humans. We now know that chimpanzees not only have genomes similar to our own but also plot political coups, wage wars over territory, pass on cultural traditions to younger generations, and ruthlessly strategize for resources, including sexual partners. In *The New Chimpanzee*, Craig Stanford challenges us to let apes guide our inquiry into what it means to be human. With wit and lucidity, Stanford explains what the past two decades of chimpanzee field research has taught us about the origins of human social behavior, the nature of aggression and communication, and the divergence of humans and apes from a common ancestor. Drawing on his extensive observations of chimpanzee behavior and social dynamics, Stanford adds to our knowledge of chimpanzees' political intelligence, sexual power plays, violent ambition, cultural diversity, and adaptability. *The New Chimpanzee* portrays a complex and even more humanlike ape than the one Jane Goodall popularized more than a half century ago. It also sounds an urgent call for the protection of our nearest relatives at a moment when their survival

is at risk.
