Cities have become increasingly important to global politics, but have largely occupied a peripheral place in the academic study of International Relations (IR). This is a notable oversight for the discipline, although one which may be explained by IR's traditional state centrism, the subjugation of the city to the demands of the territorial state in the modern period, and a lack of conceptual and analytical frameworks that can allow scholars to include the impact of cities within their work. Presenting case-specific scholarship from leading experts in the field, each contribution guides the reader through the changing nature of cities in the international system and their increasing prominence in global governance outcomes. The book features case studies on the financial power of cities, city action in the security domain, collaboration of cities

in coping with environmental problems, transnational urban regions, and mayors as international actors to illustrate if the relationship between the city and the state has changed in profound ways, and how cities are empowered by structural changes in world politics. The multidisciplinary and global focus in *The Power of Cities in International Relations* sheds much needed light on the significance of the reemergence of cities from the long shadow of the nation-state. Only by examining the mechanisms that have empowered cities in the last few decades can we understand their new functions and capabilities in global politics. As we all know, large ocean going ships never collide with icebergs. However, occasionally life deals out some unexpected pleasures for us to cope with. Surviving any disaster in life is usually a lot easier if you have prepared adequately by taking into account the likely problems, solutions, and their implementation. In this IBM Redbooks publication, we limit ourselves to those situations in which it is likely that a SAN will be deployed. We present the IBM SAN portfolio of products, going a little under the surface to show the fault tolerant features that they utilize, and then describe solutions with all these features taken into account. Each of these solutions was built on practical experience, in some cases with cost in mind, in some cases with no cost in mind. Any well-thought-out SAN design will have taken every single one of these concerns into account, and either formulated a solution for it, or ignored it, but nonetheless understanding the potential exposure. With these points in mind, in this book we have two objectives: to position the IBM SAN products that are currently in our portfolio; and to show how those products can be configured together to build a SAN that not only allows you to survive most forms of disaster, but also provides performance benefits.

This timely Handbook offers a comprehensive outlook on global environmental politics, providing readers with an up-to-date view of a field of ever increasing academic and public significance. Its critical perspective interrogates what is taken for granted in current institutions and social and power relations, highlighting the issues preventing meaningful change in the relationship between human societies and their biophysical underpinnings. This title contains one or more Open Access chapters. Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle. This book constitutes the refereed proceedings of the 6th International Symposium on Search-Based Software Engineering, SSBSE 2014, held in Fortaleza, Brazil. Based Software Engineering (SBSE) studies the application of meta-heuristic optimization techniques to various software engineering problems, ranging from requirements engineering to software testing and maintenance. The environment that we construct affects both humans and our natural world in myriad ways. There is a pressing need to create healthy places and to reduce the health threats inherent in places already built. However, there has been little awareness of the adverse effects of what we have constructed-or the positive benefits of well designed built environments. This book provides a far-reaching follow-up to the pathbreaking Urban Sprawl and Public Health, published in 2004. That book sparked a range of inquiries into the connections between constructed environments, particularly cities and suburbs, and the health of residents, especially humans. Since then, numerous studies have extended and refined the book's research and reporting. Making Healthy Places offers a fresh and comprehensive look at this vital subject today. There is no other book with the depth, breadth, vision, and accessibility that this book offers. In addition to being of particular interest to undergraduate and graduate students in public health and urban planning, it will be essential reading for public health officials, planners, architects, landscape architects, environmentalists, and all those who care about the design of their

communities. Like a well-trained doctor, Making Healthy Places presents a diagnosis of-- and offers treatment for-- problems related to the built environment. Drawing on the latest scientific evidence, with contributions from experts in a range of fields, it imparts a wealth of practical information, with an emphasis on demonstrated and promising solutions to commonly occurring problems. The fourth estate. Sustainability holds the promise of an exciting new approach to business - one in which business goals are aligned with social and environmental goals. Multinational corporations are recognizing that we live in an increasingly resource-constrained world, and that more accountability for corporate social and environmental impacts will accrue to them. More importantly, forward-thinking executives understand that sustainability can present new opportunities for competitive advantage - whether that is by reducing costs, minimizing risk, appealing to increasingly conscientious customers, or reaching new markets entirely. With the growth of this field comes a host of interesting new career opportunities for MBAs. As companies are grappling with challenges like how to develop social return on investment (SROI) metrics or understand the potential impact of corporate carbon footprints on stock prices, there are new opportunities for the next generation of managers - managers who are not only

trained in traditional MBA fundamentals but also grounded in an understanding of the multifaceted social and environmental challenges facing 21st-century global business leaders. Entirely new career paths are opening to MBAs interested in sustainability: sustainable venture capital, green marketing, corporate social responsibility management, carbon credit trading, and sustainability consulting, to name a few. Perhaps even more than corporate executives, MBA students understand this trend. The next generation of managers can see that the future of business will require a new set of skills and responsibilities. Between 2003 and 2008, membership in Net Impact, the global organization for MBAs and business professionals interested in sustainability, increased more than fourfold. By March 2009, over 130 business schools had a Net Impact chapter. Around the world, MBA students realize that a different model will be required for businesses in the coming decades. The career paths that fall under the broad umbrella of "sustainability" are as diverse as the MBA students themselves. One student may be interested in social entrepreneurship in West Africa, and the next will be seeking advice about clean-tech venture capital careers in Silicon Valley; a third will be interested in greening global supply chains. Corporate social responsibility, sustainable product marketing, microfinance, green real estate

development, renewable energy, and other interests all likewise fall under the sustainability umbrella at times. Because of this diversity, it is often hard for business schools' career management centers to address sustainability-related career options in a comprehensive way. Many sustainability-related companies and nonprofits are not accustomed to on-campus recruiting. Others have not historically hired MBAs at all. MBA students and alumni interested in sustainability careers are often left to navigate their own internship and job search paths. And, often, they struggle. Profession and Purpose has been written to address this urgent need. Whether you are focused on an off-campus search or participating in the on-campus recruiting process, there are a host of sustainability-specific career resources you should know about. You'll need to be well versed in sustainability news and trends, and network at the right events, conferences, and company presentations. You also need to know about industry- and discipline-specific websites that post sustainability jobs for positions with titles like Corporate Social Responsibility Manager, Socially Responsible Investing Analyst, and Renewable Energy Market Analyst. Through hundreds of conversations with MBA students, professionals, and recruiters, as well as her own personal experience, the author has compiled the key job search resources and tips

for MBAs interested in sustainability careers. The book provides ideas for researching companies, making the most of your networking, identifying job and internship openings, and preparing for interviews. No matter what stage of your MBA career search process you're in, this book will help you better understand your career options in the many fields of sustainability, direct you to the best resources and help you to fine-tune your sustainability job search strategy. It's the sustainability career coach MBAs have been waiting for. As energy industries produce ever more data, firms are harnessing greater computing power, advances in data science, and increased digital connectivity to exploit that data. These trends have the potential to transform the way energy is produced, transported, and consumed. The Publisher regrets that the CD/DVD content for this title cannot be made available Online.
