A new pathophysiology textbook specifically for Australian and New Zealand nursing students Understanding Pathophysiology provides nursing students with the optimal balance between science, clinical case material and pharmacology. With entrenched bio-medical terminology that can be difficult to relate to nursing practice, pathophysiology is a complex, though essential, component of all undergraduate nursing courses. This establishes the physiology prior to addressing the diseases relative to the system and allows students to analyse and compare the normal versus altered state. This local edition of Understanding Pathophysiology incorporates a lifespan approach and explores contemporary health with specific chapters on stress, genes and the environment, obesity and diabetes, cancer, mental

illness and Indigenous health issues. Clinical case studies are included in each chapter, with each patient case study highlighting the relevant medical symptoms of a given disease within a clinical setting. This is then analysed with respect to the relevancy of each symptom, their respective affect on body systems and the best course of pharmacological treatment.
