*Computing in
Cause-Effect
Structures* Jan 18
2020 This book
focuses on
numerous examples
of tasks
represented by c-e
structure.
Cause-effect (c-e)
structures are
dynamic objects
designed for
algebraic and
graphic description
of realistic tasks.
They constitute a

formal system
providing means to
specify or
implement
(depending on
degree of
description
generality) the
tasks. They can be
transformed, thus
come under
simplification, in
accordance with
rules-axioms of
their algebra. Also,
their properties can
be inferred from
the axioms. One
objective of this
presentation, by
many realistic
examples, of
computing
capability of c-e
structures, without
entering into
mathematical
details of their
algebra. In
particular, how
computing with
natural numbers
and in propositional

calculus can be
performed by c-e
structures and how
to specify behavior
of data structures.
But also
demonstration of
many other tasks
taken from the area
of parallel
processing,
specified as c-e
structures. Another
objective is
modelling or
simulation by
means of c-e
structures, of other
descriptive systems,
designed for tasks
from various fields.
Also without
formalizing by
usage of functions
between the
systems. This
concerns
formalisms such as
reaction systems,
rough sets, Petri
nets and CSP-like
languages. Also on
such, where
temporal

interdependence between actions matters. The presentation of examples is prevalently graphic, in the form of peculiar nets, but accompanied by their algebraic and set-theoretic expressions. A fairly complete exposition of concepts and properties of the algebra of cause-effect structures is in the previous book appeared in the Lecture Notes in Networks and Systems series. But basic notions of c-e structures are here provided for understanding the examples.
